Reading Comprehension

Please find 'Reading Comprehension' document and read the information on 'Rivers of the World' and answer the questions in your books.

Rivers of the World

The Nile

The Nile is traditionally considered to be the longest river in the world. It is 4132 miles (6650 km) long - that's nearly seven times the distance from John o' Groat's at the top of Scotland to Land's End at the bottom of England! When most people think of the Nile, they think of Egypt but surprisingly, only 20% of the river is in Egypt - it also flows through other countries including Uganda and Ethiopia before ending at the Mediterranean Sea. Some people disagree about where the river starts, but it is now believed to be in the hills of Burundi.

The River Nile makes the land nearby good for growing. This is why the ancient Egyptians settled there, living and farming along the river producing food for themselves and their animals. The river became important for water and transport.

The Rhine

The Rhine flows through Germany and is 766 miles (1233km) long.
